

Get Radiant Skin by Clearing Unwanted Pigment and Blood Vessels

Stop covering and concealing your skin imperfections—and get back to the clear, youthful skin you desire, quickly, easily, and with minimal downtime. It's possible with optimized-light photorejuvenation treatment – an advanced treatment that helps clear undesirable pigment and vessels from your skin, revealing clearer skin that you'll be proud to show off.

Photorejuvenation is the nonsurgical approach to skin renewal that can transform your looks for the better—and it lets you return to your normal activities right away.

Pulses of light make all the difference, because they target pigment and vessels in your skin without harming surrounding tissue. The result? You feel little to no discomfort during the procedure, and your skin can look and feel better than ever.

Choose fast, easy, comfortable photorejuvenation to improve:

Sun spots • Age spots • Rosacea • Spider veins
Capillaries • And more!

- ❖ *No downtime—usually can return to activities immediately*
- ❖ *Fast, easy treatment sessions*

- ❖ *Minimal risk of scarring or infection*
- ❖ *Treat face, neck, chest, hands, arms & legs*

Frequently Asked Questions

Does it hurt?

Most people feel little to no discomfort during the procedure.

How quickly will I recover?

You can resume regular daily activities right away and start to see some improvement immediately.

What can I expect following the treatment?

Typically, most people experience a mild, sunburn-like sensation, possibly accompanied by some minor swelling, immediately following the treatment. This usually lasts two to 24 hours. Ask your provider to discuss other possible side effects and the necessary post-treatment care with you.

What is optimized light™ photorejuvenation?

It is a cosmetic treatment that uses gentle pulses of intense, optimized light to treat undesirable pigment and vessels which can occur as a result of aging and lifestyle choices.

What types of results can I expect?

You can expect to see a decrease in the appearance of skin pigment and vessels for a more even skin tone.

How does it work?

Photorejuvenation uses an optimized light device to deliver energy into your skin, targeting vascular and pigmented lesions, which slowly disappear as your body's natural healing process progresses.

How long does it take?

The photorejuvenation procedure can be performed in as little as 30 minutes, depending on the size of the treatment area.

How many treatments will I need?

You can see some improvement immediately. Only one or two treatments may be needed; depending on the severity of your conditions, several treatments may be necessary to achieve your best results.
